

Ravensgate Sonic 200U Well Depth Sounder Meter

The Ravensgate Sonic 200U Well Depth Sounder Meter is a self-contained, battery operated meter that uses sound waves to measure water levels. Fast, accurate measurements are possible without the use of down-hole probes or instrumentation. An access port 5/8 inches or greater in diameter in the well cap is the only requirement. Simply insert the measuring duct through the cap, push the power on switch and the measurement is completed in a few seconds. For uncapped wells, a temporary cap can be used.

Features

- Measurement offered in imperial or metric
- Gain/sensitivity - Variable or fixed; factory setting is variable
- Temperature - Also setable in normal settings
- Ignore distance mode - allows meter to ignore a set distance before reading water level
