

LOCKABLE J PLUGS

The "J" Plug is an expandable pressure plug developed to fit inside a flush threaded riser or casing. When the wing bolt is turned, the "O" rings depress and expand to create a watertight seal helping to ensure against any contaminants leaking into the well.

The "J" Plug consists of mold injected PVC housing with a PVC wing bolt. A black laminated triangle with the words "NO FILL " is located on the top of the PVC wing bolt in accordance with API's Recommended Practice 1615. For additional safety, " MONITORING WELL – NO FILL" is molded on the top of the "J" Plug in raised letters.

APPLICATIONS:

- White PVC housing and wing bolt
- "MONITORING WELL – NO FILL" in raised lettering
- 316 Stainless locking clasps help prevent accidental filling or tampering.
- Two Buna -N "O" rings; one depresses as the other expands to ensure a watertight seal
- Black triangle warning symbol located on top of wing bolt
- Shipped in individual, contaminate free plastic bag and boxed
- Inert material construction
- Accommodates a #1 Padlock
