

Solinst 9100 STS Gold Telemetry System

The new STS Gold Telemetry System provides an economical and efficient method to access remote data instantly. Built for Levelloggers, the system combines high quality dataloggers, intuitive software and a variety of wireless communication options to create a remote monitoring solution. Cellular, satellite and radio options give the flexibility to suit any project. Alarm notification and diagnostic reporting make system maintenance simple.

APPLICATIONS:

- Remote water level monitoring
- Long-term monitoring
- Management of water taking
- Aquifer management
- Stormwater monitoring
